

Zhu J-X, "Fluidization of Fine Powders", Chapter 10 in *Advances in Granular Materials: Fundamentals and Applications*, eds. S. J. Antony, W. Hoyle and Y. Ding, Royal Society of Chemistry, London, pp 270-295, 2003.

**Table of Content:**

- 1 Introduction
- 2 Interparticle Forces
- 3 Fluidization Characteristics of Fine Particles
  - 3.1 Channelling
  - 3.2 Agglomeration
  - 3.3 Onset of Pseudo-minimum Fluidization --- Bed Disruption
  - 3.4 Bed Expansion and Pressure Drop
  - 3.5 Further Classification of Group C Powders
- 4 Aids in Fluidizing Fine Powders
  - 4.1 Mechanical Vibration
  - 4.2 Acoustic Wave Vibration
  - 4.3 Mechanical Stirring and Gas Pulsation
  - 4.4 External Magnetic Forces
  - 4.5 Addition of Coarser or Finer Particles as Flow Conditioners
  - 4.6 Fluidization Using Different Gases and through Surface Modification
- 5 Effects of Temperature on Fine Powder Fluidization
- 6 Applications/Potential Applications
  - 6.1 Production of Fine Particles
  - 6.2 Modification of Powder Surface and Introduction of Specific Functions
  - 6.3 Fine Particles as Catalyst or Flow Aids
  - 6.4 Pharmaceutical Applications
  - 6.5 Powder Coating
